

SYSTEM, METHOD AND COMPUTER PROGRAM PRODUCT FOR SUPPLY CHAIN USER-SPECIFIC REPORTING

5

ABSTRACT

A system, method and computer program product are disclosed for reporting in a network-based supply chain management framework. Utilizing a network, data is received from a plurality of stores, distributors and suppliers of a supply chain. The data is processed. Subsequently, a request is received from a user for the processed data. The user is then identified as either relating to a store, distributor or supplier and the processed data is formatted based on the identification of the user as a store, distributor or supplier.
